

SE4033 Formal Methods in Software Engineering

Course Outline

Program Learning Outcomes

- Problem Analysis
 - Identify, formulate, research literature, and analyze complex computing problems, reaching substantiated conclusions using first principles of mathematics, natural sciences, and computing sciences.
- Design/Develop Solutions
 - Design solutions for complex computing problems and design systems, components, and processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.
- Investigation & Experimentation
 - Conduct investigation of complex computing problems using research-based knowledge and research-based methods.

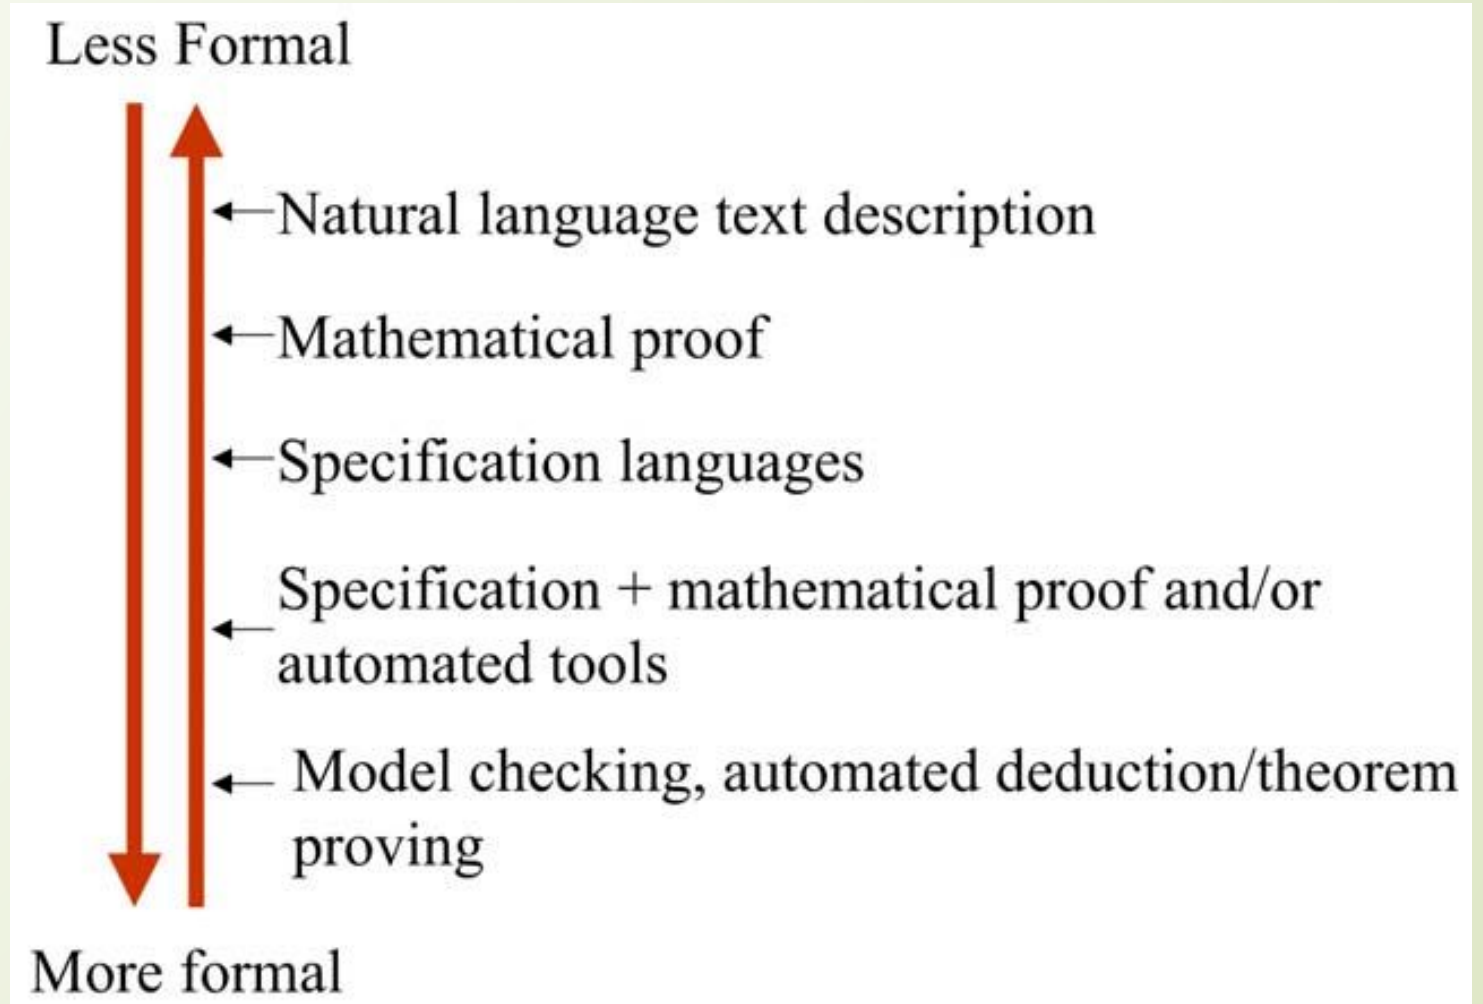

Course Learning Outcomes (CLOs)

- Describe the costs and benefits of formal methods'
- Construct formal models of sequential
- software systems Implement sequential software systems based on formal models
- Verify attributes of formal models
- Demonstrate formal correctness of simple procedure

Formalization Spectrum

□ From Less to more formal

Outline

Software Development Life Cycle
(SDLC) Revision

Formal Methods for
Software
Engineering

Logic (Boolean)
Regular Expressions
Finite State
Machine/Automaton
Algorithms
Petri Nets

Outline: Analysis

- Propositional Logic
- Specification in VDM-SL
- Algebraic Specifications
- Analyze well formlessness
 - Completeness
 - Consistency
 - Robustness
- Analyze correctness
 - Static analysis
 - Simulation
 - Model checking

Outline: Sets

Sets for System Modelling

Declaring and Defining Sets in
VDM-SL

Set Operations

Implementing Sets in Programming

Language

Collection Classes

Outline: Sequences

Notation

Sequence Operators

Defining a Sequence by Comprehension

Using the Sequence Type in VDM-SL

Implementing Sequences

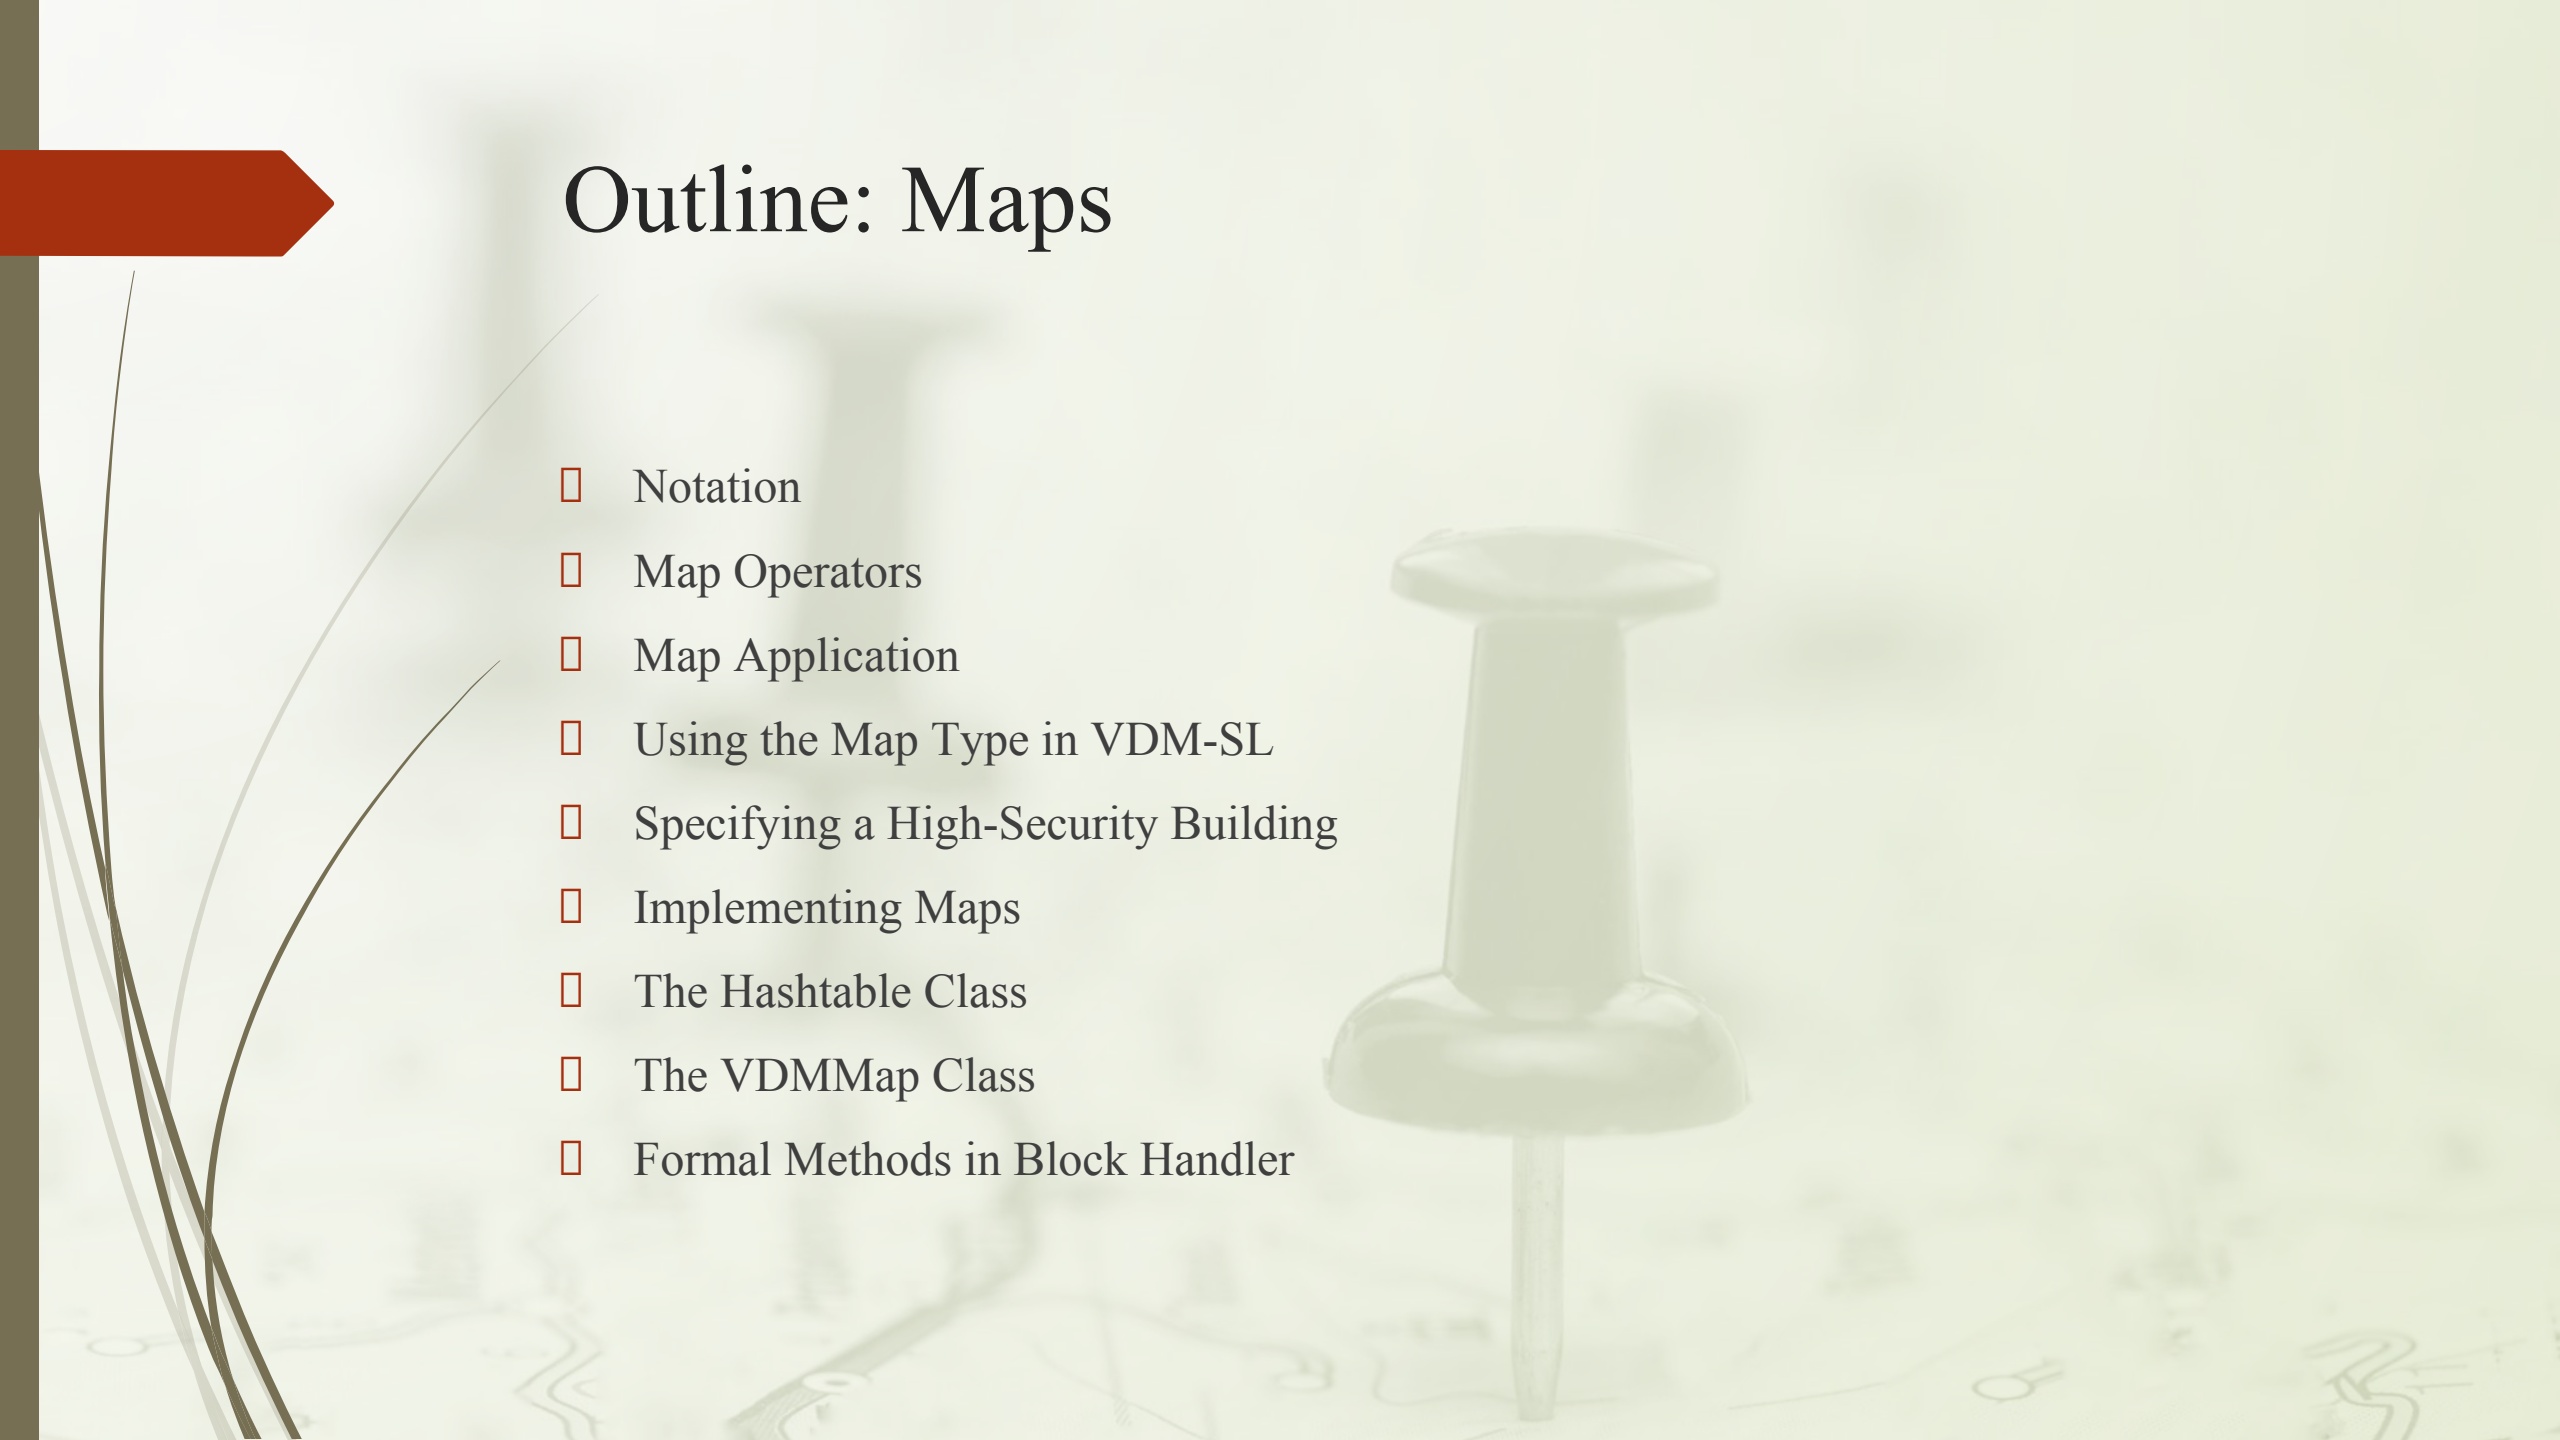

The VDMSequence Class

Outline: Composite Objects

- Defining Composite Object Types
- Composite Object operators
- Implementing Composite Objects
- Implementing the Process Management System

Outline: Maps

- Notation
 - Map Operators
 - Map Application
 - Using the Map Type in VDM-SL
 - Specifying a High-Security Building
 - Implementing Maps
 - The Hashtable Class
 - The VDMMap Class
 - Formal Methods in Block Handler
- 

Formal Specifications

Formal Specification Languages

Algebraic Languages (Larch, OBJ, Lotos)

Model Based Language (Z, VDM, B, CSP, Petri Nets)

Formal Methods For Modeling Biological Regulatory Networks

Outline: Models

VDM II

Formal Methods for Software

Specification and Analysis

Abstract Model Specifications Alloy: A Lightweight Object Modeling Notation

Object Constraint Language (OCL)

Larch Shared Language (LSL)

Outline: Z Notations

Z Notations

Relations in Z Specification

Books

- Formal Software Development
From VDM to Java
- Quentin Charatan and Aaron
Kans

Evaluations

Assessment Item	Number of Assessments	Weight (%)
Assignments	3	5
Quizzes	4	10
Midterm Exam	2	30 (15 each)
Final Exam	1	50
